Abstract (en)

A support pillow (2) for invalids or the elderly, the stuffing (6) of which is divided into at least two sections (8a,b, 10a,b, 12a,b), is described. The arrangement is such that the pillow (2) is provided with a preferential line of folding between adjacent stuffing sections (8a,b, 10a,b, 12a,b). The divisions may be such that when part of a body is leaned or against the pillow (2), the pillow (2) is caused to fold along the preferential lines of folding to conform to the contours of the part of the body.
