Abstract (en)

[origin: EP0384840A1] The invention relates to a process for producing a composite seal structure (1) for bridge decks in which there is applied, between the base support (2) at least partially made of concrete and the sealing layer or layers (5), a draining bituminous mixture layer (4) whose high void content enables air and/or water which is released in the form of vapour from the support (2) to be absorbed so as to avoid the appearance of bubbles, blisters and the like. <IMAGE>
