Abstract (en)
[origin: EP0385104A1] The invention relates to a plastic closure which can be screwed onto the neck (11) of a plastic container and has a threaded ring (2) and an insert part with a flexible bellows (10) and a pourer (7), onto whose external thread (12) a cap (1) can be screwed, the cap (1) being of integral construction with the threaded ring (2) and the top wall (8) of the cap (1) being moulded on in a projecting manner at a distance from the top wall of the threaded ring (2), corresponding to the Patent Application P 3,730,225.6. In order to improve a plastic closure of this type in such a way that, whilst maintaining good pouring characteristics, e.g. by means of a flexible bellows, the automatic production is simplified and made less expensive and the handling of the plastic closure is additionally made more easy, it is proposed according to the invention that the cap (1) be connected to the threaded ring (2) via a tear-off strip (3). <IMAGE>
