Abstract (en)
[origin: EP0385205A1] In order to increase the yield in UV high-power cylindrical emitters, the inner dielectrics (3) are very small in comparison with the outer dielectric tube. As a result of the eccentric arrangement of the dielectrics and the outer electrodes (2) only on the surface adjacent to the inner dielectric (3), and the simultaneous design of the outer electrode (7) as a reflector, a preferred direction of the emitted radiation is achieved.
