Abstract (en)

[origin: WO9002618A1] A device for making metal filaments from spherical particles of metal powder comprises a forming instrument (1) having a main (2) and an additional (3) part and a rotational drive (10) cinematically connected to each of them. One part (2) of the forming instrument (1) is mechanically connected to an arrangement (7) providing for permanent pressure perpendicular to the main and the additional part of the forming instrument.
