Abstract (en)

An overflow-preventive bottle stopper which is to be mounted on a fluid bottle container by means of screw joint to let the fluid be smoothly poured out along a circular wing portion (13) and a circular tube (14) through a curved outlet (15), and to let the overflowed fluid flow back into the bottle container along the circular tube (14) and the circular wing portion (13) through a hole (16) made between therebetween. The main feature of the present invention is seal specific bottle container and also to prevent the contained fluid from moistening and staining the bottle container.
