Abstract (en)
[origin: EP0386504A1] Lock-cylinder keys can be provided with a key profile consisting of a plurality of profile parts (1, 2, 6) adjoining one another in a row and having individually distinguishable contours of capital letters. So that the profile variation of such keys can be recognised more easily, the profile parts (1, 2) having a contour (4, 5) of a capital letter or digit of at least double its written line width (s) are arranged above one another without any intermediate transition, whilst the profile part (1) forming the key spine has the contour of a letter (4) or digit (5) of a thickness at its outer end of a plurality of written line widths (s) and the profile part (2) forming the key breast has a contour of a letter (4) or digit (5) terminating at its outer end in a single written line width (s). <IMAGE>
