Abstract (en)

[origin: EP0386527A2] The invention relates to a method of blow-injection of fuels with low residue content, such as wood and biomaterials, with combustion and ash disposal and is characterised in that the stream consisting of carrier air and the combustion residues is subjected to fluidising air, the combustion proceeds to completion in the fluidised bed and the incombustible residues, particularly ash, are exclusively disposed of or discharged via the flue gas path.
