Abstract (en)

[origin: EP0386559A1] The shower partition contains at least one stationary wall element (6, 8) and has an entry opening (20) without doors. The shower partition is to be constructed in such a way that only few components are required and a high degree of standing stability is achieved. It is proposed that a central column (18) with a hollow space (40) is arranged on the one side of the entry opening (20), in which hollow space at least partially a tap fitting (26) and water pipes (34, 35), connected thereto, are arranged, and that the one stationary wall element (6) is tightly connected to said central column (18). The central column (18) is constructed as a separate prefabricated component with a removable panel profile (38) and allows, on the one hand, simple installation of the tap fitting and, on the other hand, secure attachment of the wall element (6). <IMAGE>
