Abstract (en)
[origin: EP0386589A1] In a water flow-out armature (1) with a hose pipe (2) for supplying the water, a gripping piece being provided, to one end region of which the hose pipe (2) can be connected and at the other end region of which a water outlet mouthpiece (15) is provided, it is proposed, for the improvement and in particular the variable shape of the handle, that the gripping piece be constructed as a sleeve (13), to which two end pieces (11, 12) can in each case be connected to a coupling, the water-carrying connection through the sleeve (13) being formed by a pipe (14) which is mounted in each case with one end region sealingly in a receiving bore of the end pieces (11, 12). <IMAGE>
