Abstract (en)

[origin: EP0386725A1] Present invention refers to a system for balancing the door of a household appliance, particularly of a dishwashing machine, comprising means for hinging the door to the appliance body, hooking means (3) connected to the door, anchor means (11) integral with the appliance body, elastic means (4) connected between the hooking means and the anchor means, in order to deliver to the door a balancing couple counteracting its opening, adjusting means (8) for varying the strength of said elastic means, and transmission means (7), working together with said elastic and adjusting means; the main characteristic of the invention consists in that said elastic means and said transmission means are located in the front part of the appliance.
