Abstract (en)
[origin: WO8904742A1] Abrasive foil, characterized by the use of a steel strip foil as a flexible backing for an abrasive, and abrasion process for producing self-cooling abrasive surfaces, permitting rapid interchange and reliable adhesion to rotating, oscillating, and even stationary receivers. The abrasive foil and receiver are used to implement the process. A holding surface on the receiver is formed by a permanent magnetic adhesive surface and/or by holding parts directed vertically toward the holding surface, and by congruent recesses in the receiver surface.
