Abstract (en)
[origin: EP0387466A2] The pitch has an infra-structure which is an underground network of inclined channels that are covered by a grid. The rest of the surface is covered with a layer of concrete which is 10-12 cm thick. The concrete is covered with a grooved layer in hard plastics material. An artificial perforated mat made of elastic material, such as natural or artificial rubber, covers the whole surface. The mat's upper surface has conical projections of the same material or strengthened with nylon, or other threads. Hot air can be circulated through the channels.
