Abstract (en)

[origin: EP0387497A2] In a system for delivering damping liquid having at least one application roller resting on the plate cylinder, which roller is connected to the ink grinding cylinder of an inking unit via two oleophilic intermediate rollers, in order to switch off one of the intermediate rollers from the ink supply and/or the supply of damping liquid, at least one of the two oleophilic intermediate rollers (3, 4) can be brought into a second switching position. <IMAGE>
