Abstract (en)
[origin: EP0387682A2] The invention relates to binders based on aqueous alkali metal silicate solutions having an SiO₂ content of 22 to 33% by weight and a content of glycerol and polyglycerols, which contain: a) 70 to 99% by weight of an aqueous alkali metal silicate solution having an SiO₂ content of 23 to 37% by weight and a molar ratio SiO₂ : Me₂O of (2.0 to 3.3) : 1, Me denoting sodium and/or potassium and/or lithium, and b) 1 to 30% by weight of a mixture, dissolved in the alkali metal silicate solution, of glycerol and polyglycerols having an OH number in the range from 1560 to 1200, containing, based in each case on the mixture: 70 to 15% by weight of glycerol, 40 to 6% by weight of diglycerol, 5 to 20% by weight of triglycerol, 3 to 13% by weight of tetraglycerol and 12 to 30% by weight of higher polyglycerols, the proportions of the stated individual components of the mixture summing to 100% by weight in each case.
