Abstract (en)

[origin: WO9002768A1] A silicone-epoxy resin composition of this invention comprises a silicone-epoxy resin of general formula (I) and a curing agent. It has an excellent compatibility with an epoxy resin or curing agent and a high curing rate and, when cured, offers well-balanced flexibility, humidity resistance and heat resistance. Hence, it is effective for the bonding and sealing of electric or electronic components requiring a low stress. For example, a conductive adhesive prepared by adding a conductive filler to this composition can exhibit an excellent performance in the bonding of large-sized ICs or LSIs or in assembling quartz oscillators.
