Abstract (en)
[origin: JPH02279339A] PURPOSE: To simplify manufacture of a pressing element by incorporating a spacer in a holder of the form of sliding block, and airtightly clamping an edge of a film between the spacer and the holder. CONSTITUTION: A space 11 is contained in a holder 14 in a sliding block state. An edge 17 of a body 10 for grasping a rear surface of a guide protrusion 15 of the holder 14 is airtightly clamped at the protrusion 15 by pressing the spacer 11. Accordingly, the edge 17 between the protrusion 15 of the holder 14 and the edge 17 of the corresponding spacer 11 is clamped. Thus, manufacture of the pressing element is facilitated.
