Abstract (en)
[origin: EP0388656A2] The case (10) of the metallic drawer is provided at the rear end with a roller plate (25), to which the axle of a laterally projecting roller is attached. Since this roller plate is subjected to considerable forces, it consists of two straps (26, 27), one strap (26) of which is bent away from the rear wall (19) towards the rear and the other strap (27) of which forms an extension of the side wall (17). The straps of the roller plate (25) are connected to each other by riveting a roller axle which is inserted through the holes of the strap. <IMAGE>
