Abstract (en)
[origin: EP0388728A2] The invention relates to a frame element as support for operating groups in a cooker. This frame element forms the cooker panel, into which the individual assemblies, such as for example cooking plate regulators, cooking plate displays, temperature indicators and the timer in the form of modules with the same height dimensions can be inserted laterally. The distances between the individual assemblies can be varied by the insertion of dummy modules. The entirety of the modules lying in a row next to one another is secured at the respective outer edge by fastening elements which fix the outer modules. <IMAGE>
