Abstract (en)

[origin: EP0388765A1] The closure lid for a container neck, in particular a cooler lid, comprises a lid cap (10) and a pot-shaped inside part (12) of the lid, connected to said lid cap, having an annular flange (16), which is directed radially outwards and bears an annular seal (18) intended for resting on the neck edge, and having an overpressure/negative pressure valve comprising an annular sealing membrane (44) which rests with its inside surface facing the interior of the container on an annular sealing surface (46) of the inside part (12) of the lid and on a closure part (54) which has a smaller diameter in relation to said sealing surface, covers the central opening (52) of the sealing membrane (44), is tensioned against the inner surface of the sealing membrane (44) by a negative pressure spring (56) supported on the bottom (58) of the inside part (12) of the lid, and on whose outwardly facing surface a support disc (42) rests under the pressure of an overpressure spring (34). In the closure lid, the prestress of the overpressure spring (34) is adjustable. <IMAGE>
