Abstract (en)

[origin: EP0388911A1] Device and method for packaging and pressing fibre flocks from short-cut fibres or fibres with high sliding properties in bale form by means of a filling shaft (2), in which a distributor device (6) ensures that the fibre flocks are transferred uniformly to a clearing device (7) already having the width (4) of the press-container orifice (5), the clearing device (7), in interaction with a longitudinal smoothing device (9), moving the flocks further in such a way that a uniform feed of the press container (11) is obtained. Fibre flocks introduced in this way can then be prepressed, finish-pressed, packaged to form bales and sheathed in a way known per se. <IMAGE>
