Abstract (en)

[origin: EP0388992A2] The invention relates to a reinforcement connection having at least one block-like holder and to this holder for fixing a box-like retaining element, made at least partly of sheet steel, of this reinforcement connection to a concrete formwork made of steel, the holder being formed at least partly by at least one permanent magnet. The special feature consists in that the retaining element forms at least one projection on each of its legs, in that the strip- or block- like holder forms with one peripheral side a bearing face for the holder on the formwork, and in that, on a second, adjoining peripheral side, at a distance from the first peripheral side, at least one bearing face for the projection is formed. <IMAGE>
