Abstract (en)

Flashing comprises an attachment portion (7) for attaching the flashing to the straight part of the roof, and comprising a flashing portion (8) being at least partly corrugated, the height of the corrugations (9) decreasing from the outer edge (10) of the flashing portion (8) positionable against the profiled roof part, in the direction to the attachment portion (7) and the flashing portion (8) being at least substantially free of thick parts and being made of supply depliable material, resulting in that the flashing portion (8) is supply, fan-like spreadable and yieldingly bendable due to pressure exerted by the profiled roof part, resulting in that the course of the outer edge (10) of the flashing portion (8) adjusts to the profiled roof part.
