Abstract (en)

The present invention relates to a storage system with adjacent lockers. The system is characterised in that it comprises, connected to a microprocessor-based device (4), a keyboard/display screen assembly (14) enabling an operator to record the identity of a user; a device (15) for supplying the user with a ticket on which are stored at least the number of the locker allocated to the user and the identity thereof; and a device (18) for receiving and reading the ticket (16) associated with each locker (2). The system finds application in stations or airports. <IMAGE>
