Abstract (en)

[origin: WO9001445A1] The high weight of mine-sweeping means transported by droning impedes the manoeuverability of the drone. To improve the manoeuverability, the invention proposes that the weight of the mine-sweeping means (100) be chosen so that it is practically unaffected by buoyancy during transport and that, after the anchor cable is encircled by the clamping device, the mine-sweeping means (100) is made buoyant by casting off a tare weight (118).
