Abstract (en)

A capacitor winding (4) is installed in a metallic housing (5). The winding (4) has electrode foils (7, 9), projecting on both end sides, which are in thermal contact with the base (6) and a metallic plate (16). The thermal bridges formed in this way ensure better thermal dissipation in the event of high alternating current loads. <IMAGE>

Abstract (de)

Ein Kondensatorwickel (4) ist in ein metallisches Gehäuse (5) eingebaut. Der Wickel (4) besitzt an den beiden Stirnseiten überstehende Elektrodenfolien (7, 9) die in thermischem Kontakt mit dem Boden (6) und einer metallischen Platte (16) stehen. Die hierdurch gebildeten Wärmebrücken sorgen für eine bessere Wärmeableitung bei hohen Wechselstrombelastungen.
