Abstract (en)

[origin: EP0390229A1] A packaging device is disclosed for filling tubular casing with product and attaching metal clips to the casing to enclose product therein. The device has casing gathering means with fixed and movable members (156,158), each member having orthogonal jaws (202,203,210,212) which together define a rectangular opening. Movement of the movable member (158) towards the fixed member (156) reduces the opening towards a clip forming die (176) at the junction between the jaws (202,203) of the fixed member.
