Abstract (en)

An ink jet recording apparatus wherein an image is formed on a recording material by ejection of coloring agents having different colors from plural recording heads (110C,M,Y,BK) includes a discriminator for discriminating whether an image having a edge and an image having high image density are overlaid or not; and a controller, responsive to the discriminator, for reducing quantity of the coloring agent for the high density image at a position corresponding to at least one of the edge and a periphery of the edge.
