Abstract (en)

A support structure for a tiled wall assembly supports tiles (14) hanging on a board (10). The tile hanging board (10) such as a cement board can constitute a wall and is provided with a plurality of protrusions (12) each of which has an upwardly directed hook portion (121) at an upper end. The tile (14) has an engaging groove (16) on the inside. The groove (16) terminates at a downwardly directed hook portion (141) at an upper end. The downward hook (141) of the tile (14) is hung on the upward hook (121) of the protrusion (12). The lower inside of the tile (14) is secured to the board (10) by an adhesive (30).
