Abstract (en)

Device for cylinder cleaning, comprising a pocket (101) and a flexible rectangular protective film (130). The longitudinal pocket (101) contains a pasty stripping mixture (10) and can be opened, as desired, along at least one edge to make it possible to expel a pasty mixture (10) under a pressure effect. The protective film (130) inert towards the mixture is essentially as long as the cylinder on which it is intended to be installed, and its width is larger than the circumference of the cylinder. Means and/or an arrangement make it possible to place the opening edge (12) of the pocket (101) between the film (130) and the cylinder (50). <IMAGE>
