Abstract (en)

[origin: WO9004062A1] A flat textile body is composed of adjacent bands (2) that extend in the perpendicular direction to its main center-plane (M). Each band has marginal sections (4) made of woven or knitted warp (6) and woof threads (8). Between the marginal sections at least most of the woof threads are floating threads. Adjacent marginal sections (4) of adjacent bands (2) are not linked to each other by purely mechanical means, i.e. glued or soldered. The resulting flat body is easy to produce in a precise manner and is very versatile. In particular, it can be cut along its main center-plane (M) into two symmetrical pile carpet plates.
