Abstract (en)
[origin: EP0391063A2] The invention relates to an espagnolette lock with espagnolettes displaceable by rotating the latch or the like and with a follower which is assigned to the latch and which, held in its basic middle position, is pivotable out of this in opposite directions counter to a spring load, the follower being assigned an actuating arm engaging on a slide which is subject to the action of a spring, and, to achieve a favourable control of the espagnolettes, the said invention involves providing a coupling between the actuating arm (20) and espagnolettes (45, 48), in such a way that, in the event of a movement caused by rotating the latch (7), the actuating arm (20) drives the espagnolettes (45, 48) with it in both directions.
