Abstract (en)
[origin: EP0391700A2] A window sealing strip (10) is for use in wooden windows where a fixed frame is received a hinged leaf. The sealing strip is for sealing the gaps between the closed leaf and the fixed frame to prevent the passage of draughts. The sealing strip has a root a base (16) and a flipper seal (17) and is mounted on the fixed frame (11) with the flipper seal (17) engaging the moveable leaf (12). The majority of the strip is extruded from a rigid PVC plastics material. However, the portion of the flipper adjacent the base, the nose of the flipper and a projection on the root are all made from a plastics material which is more resilient than the PVC plastics material. This flexible hinge gives the flipper seal excellent compression set performance.
