Abstract (en)

A rigid frame 5-8 is applied against the facade and carried by arms 11, 12 resting on the acroterium; an isosceles triangle-shaped gantry 14, 15 is articulated by its base on the lowest part 8 of the frame in order to assume various inclinations with respect to the facade, corresponding to various distances between the platform and the facade; the apex 15 of the gantry is retained by the safety cable 16. <IMAGE>
