Abstract (en)  
[origin: EP0391800A1] The clip is noteworthy in that the jewel-holder plate and the pinching tab have, on their face which is applied against the front and rear faces of the ear lobe, zones (Z1, Z2, Z3) in relief disposed so that they ensure, by local compressions, a firm holding of the ornament on the said lobe. These zones in relief consist, in respect of one of the fastening parts, of two zones (Z1, Z2) which are offset in terms of height, and, for the other fastening part, of a zone (Z3) which is positioned so as to be located between the said zones (Z1, Z2) when the plate (1) and the pinching tab (2) are applied on either side of the lobe (L) in order to ensure, by local compressions, a firm holding of the ornament on the said lobe by matching the morphology of the latter. <IMAGE>
