Abstract (en)
[origin: EP0391813A1] The present invention relates to a rear-entry alpine-ski boot, comprising a lower shell part (1), which is rigid or semi-rigid, beneath an upper (3) comprising a rear cover (5) articulated in order to facilitate putting-on and taking-off of the boot, and a removable end piece (11) which is attached and immobilised, by locking means (12), on the extreme rear part (2a) of the sole (2) of the boot. <??>This alpine-ski boot is characterised in that the lower shell part (1) is open towards the rear, in other words its two lateral walls (1b) do not join at the rear of the sole (2) of the boot and the heel end piece (11) forming a release end piece is extended upwards by a curved upper part (11a) forming a closure, its concave side facing forwards, intended to be applied over the rear opening (9) of the lower shell part (1), delimited between the rear edges (1d) of its lateral walls (1b), covering the heel of the skier towards the rear and ensuring the continuity of the lower shell part (1) towards the rear. <IMAGE>
