Abstract (en)  
[origin: EP0391888A2] High temperature resistant stack support comprising a preferably dimensionally stable core which is surrounded at least in part by a high temperature resistant assembly of polyimide fibres of the general formula <IMAGE> where n is an integer greater than 1 and A is a 4-valent aromatic group. <??>The stack support can be produced by shrinking a web of polyamide fibres of the general formula (1) onto the core by heating. <??>These stack supports are suitable in particular as supports for stacks of heated aluminium profiles, in particular during a heat treatment of the aluminium profiles. <IMAGE>
