Abstract (en)

[origin: WO8903881A1] An analog human colony stimulating factor (hCSF) is disclosed, comprising a mutant amino acid sequence which is substantially homologous to the native sequence of an hCSF having at least one N-glycosylation site, wherein the mutant sequence comprises at least one amino acid substitution, deletion or insertion inactivating the N-glycosylation site.

Abstract (fr)

Est décrit un facteur humain analogue de stimulation de colonie, comprenant une séquence d'amino acides mutante sensiblement semblable à la séquence native d'un hCSF (facteur de stimulation de colonie humain) ayant au moins un site de N-glycosylation, dans lequel la séquence mutante comprend au moins une substitution, une délétion ou une insertion d'amino acide, rendant inactif le site de N-glycosylation.
