Abstract (en)
[origin: EP0392045A1] The invention relates to a roller door screen for roller doors for the closing and opening of door or gate openings, comprising a continuous, unbroken hanging (1) made from a flexible material and metal profiles (3) fastened horizontally on the latter, a hollow space (10) being disposed between the hanging and the profiles. To improve the sealing between the hanging (1) and the profiles (3), and also the soundproofing and/or heat-insulating properties, the invention proposes that there be fixed between the profiles (3), on the hanging (1), connection profiles of H-shaped cross-section and having receiving slots (6, 7) for the edge regions (4, 5) of the profiles (3), these slots extending over the entire breadth of the hanging (1). <IMAGE>
