Abstract (en)
[origin: EP0392070A2] A central locking system has an actuating element (1) possessing a diaphragm (4) which can assume three different positions according to the amount of pressure applied. An actuating rod (6) connected to the diaphragm (4) can displace a locking lever (7) of a door lock and, in an end position of the diaphragm (4), by means of an actuating ramp (8) a theft-prevention lever (9) which, in the theft-prevention position, enters a catch receptacle (13) of a rod (12) which connects a doorknob (11) to the locking lever (7). <IMAGE>
