Abstract (en)
[origin: EP0392131A1] Shelf support (14) comprising at least two profiled parts (1, 2) forming between them a groove (13), a first profiled part (1) forming one of the upper and lower sides of the groove (13), a second profiled part (2) forming the other of these sides, in which at least one of the sides of the groove (13) has at least one zone capable of elastic deformation, the second profiled part (2) being interposed between a face of the shelf (14) and a support element (8) of the first profiled part after insertion of the shelf, means of adjustment of separation being provided on the previously mentioned support element (8) and on the second profiled part (2) in order to cooperate in order to position the latter with respect to each other according to the thickness of the shelf board. <IMAGE>
