Abstract (en)
[origin: EP0392137A2] The invention relates to a holding structure for exchangeable information supports having an attachment part for fixture to edge regions of shelves, containers and the like. The information supports are situated in a receiving pocket which is formed from a rear wall and a transparent front wall. The rear wall and front wall are connected to one another in an articulated manner at their base and the upper edge of the rear wall overlaps the free edge of the front wall in the form of a cover. The fixture of the holding structure (1) to the attachment part (3) is effected via an intermediate piece (2) fitted with catch elements (22, 23, 24, 25). The intermediate piece (2) is in engagement with catches (1221, 1231) constructed on the reverse side of the rear wall (12). The catches (1221, 1231) can engage in each case in associated receptacles of the catch elements (22, 23, 24, 25), by which means the holding structure can be used in defined angular positions relative to the attachment part (3).
