Abstract (en)
The present invention relates to a system for attaching a protective, aesthetical and functional covering to a dishwashing machine, comprising a cabinet which houses a washing chamber and means to wash the dishes and which comprises a door (1) allowing the access to the washing chamber, which can be open swinging in respect of its axis. The main feature of the invention is that said covering is realized as a lid (6) which covers at least partially the frontal side of the cabinet of the dishwashing machine and which can be open by a movement independent in respect of the door (1) of the dishwashing machine.
