Abstract (en)
[origin: EP0392700A2] A security door comprises major and minor sheet metal trays (1 and 18) respectively having panels (2 and 19) and standing walls (3,4 and 20). The walls (3,4) have marginal portions (5,6) inturned from the walls (3,4) and overlying the panel (2) and terminal re-entrant portions (7,8) turned from the portions (5,6) towards the panel (2). Elongate frame members (10,11) are disposed within the tray (1) alongside the walls (3,4) and have slots (15) receiving the portions (7,8) and walls (20). The frame members (10,11) have bevelled edges (13,14) permitting the members (10,11) to be applied laterally into the tray (1) so as to interengage with the walls (3,4) and portions (7,8).
