Abstract (en)

The invention concerns a supporting assembly for a working table. This assembly comprises: - a substantially rectilinear column (1); - at each of the ends of this column, a plate (3), this plate having on its face which is not adjoining the end of the column and perpendicular to the axis of the latter, an angular protruding part (17) pierced with housings (18) for screws or other similar fixing means; - at the base of the column, feet (4) comprising fixing orifices capable of being brought into correspondence with those of the lower plate in order to be made integral with the latter in a plurality of positions; - at the upper section of the column, at least one right-angled branch (6) of which one part (21) disposed radially with respect to the axis of the associated plate bears on the protruding part (17) of the latter and comprises at least one orifice (22) capable of being brought into coincidence with one of the orifices (18) of the plate. <IMAGE>
