Abstract (en)

[origin: EP0392986A2] There is disclosed a section-member assembly for making wing blinds susceptible to include tilting door members and/or central uprights, which blinds are made of slats (4), optionally including a closure movable or fixed blade. This assembly essentially comprises an open section member (1) which can be snap engaged in a section member (2) defining the uprights and cross-members of the wing and adapted to restrain the end portions of the slats (4) as well as to house spacer plates (6). The assembly further comprises section members (7) which can be snap applied on the bottom cross-member and on a portion of the frame uprights for making tilting door members. Blades (10) are furthermore provided which can be coupled to the slats (4) and can be suitably turned, as well as means for simplifying the making of the central uprights.
