Abstract (en)
[origin: WO9004665A1] The device comprises a bath (1) for treating the articles (2) designed so as to provide for a laminar up-current of the electrolyte within the article treatment zone (2). The bath (1) is connected, through an electrolyte feed pipe (6) provided with a pump (7) and through an electrolyte discharge pipe (8), to a bath (9) for cleaning the electrolyte. The articles (2) are charged into the bath (1) by means of arrangements (4) with mechanisms (5) for gripping the articles (2).
