Abstract (en)

[origin: EP0394140A1] The invention relates to a fluid circulation and distribution apparatus with two inlets (19, 20) and one outlet (9), with a partition (3) defining an intake chamber (6), in which the two inlets (19, 20) are located together with their closing devices (15, 16), and a discharge chamber (4) forming a shell in which rotates a turbine (5) capable of rotating in both directions. It comprises, in the discharge chamber (4), mobile elements capable of controlling the closing devices (15, 16) of the two inlets (19, 20) as a function of the fluid flow. <IMAGE>
