Abstract (en)
[origin: WO8909719A1] A suspension for a motorcycle wheel comprises an elastic element (1) C-shaped in the bending plane and hingedly connected by its end to the pendulum lever (5) carrying the wheel and to the frame of the motorcycle. The elastic element (1) in the suspension makes it possible to improve the performance characteristics of the motorcycle due to the increased elasticity of the extreme parts of the elastic element (1) which operate as a leaf spring in the directions of least resistance, whereas in its middle part the elastic element (1) operates in the direction of greatest resistance.
