Abstract (en)
[origin: EP0394804A1] A plug-in socket having control terminals (2a,b) and control contacts (3a,b) is provided with a plug-in compartment (4), for holding a module, to facilitate insertion of additional switching elements into the control circuit. Laminates (5a,b) are passed through at the base of the plug-in compartment (4), via which laminates (5a,b) the control terminal (2a and 2b) are electrically conductively connected to the control contacts (3a and 3b). Each of the laminates (5a,b) has two notches (6a,b) at which they can be separated. The plug-in compartment (4) can be closed by a hinged cover which can be fixed in the closed position by means of a snap closure. <IMAGE>
